

ALWAYS LEADING

Maximize the Health of your Microsoft Portfolio!

Microsoft offers an extensive portfolio of business solutions that, when properly deployed and managed, can significantly enhance the infrastructure of your organization. This includes critical areas of focus such as security, collaboration, management, identity, and governance. While not every Microsoft solution will be ideal for your organization's specific size, industry, and needs, the right combination of elements will not only be easier to consolidate and manage, but also improve the user experience, elevate productivity, and unlock potential for further growth.

Sentinel offers a concise Health Workshop assessing your investments. This Q&A-style session, taking under an hour, explores optimization and consolidation to boost productivity and cut costs. Post-workshop, receive a report with your Microsoft Adoption Score, industry comparisons, and recommendations to maximize your portfolio's value.

Workshop Overview

An hour-long interactive Q&A discussion to establish your organization's Microsoft health in five key areas:

- Collaboration, Security, Management, Identity, Governance
- Topics focus on your complete IT environment - everything from phone systems and email to endpoint management and cloud security

Benefits

- Obtain an overall score highlighting the current health of your Microsoft adoption
- Compare your Microsoft adoption score against peers and industry averages
- Gain a better understanding of the specific areas that would benefit most from further Microsoft investment
- Begin the process of optimizing and consolidating your environment with Microsoft solutions
